Overview

The Enterprise Pinnacle plan is available from July 1, 2021.

Enterprise Pinnacle is perfect for teams that need the most advanced work management and security features.

TIP

To find out which type of plan your account is, go to your account settings and select Account info. Your plan type is listed there along with other relevant information. External users and collaborators cannot access this information and should ask their account admin.

You can see a comparison of exactly what's included in different Wrike accounts here.

Features

The Enterprise Pinnacle plan includes all the features available to users on Free, Professional, Business Plus, and Enterprise Standard accounts, as well as:

Sharepoint, Bynder, and MediaValet integrations

With these cloud integrations to digital asset management systems, you don't have to worry about routine backups, moving files between different devices, data syncing, and being able to access important documents from virtually anywhere. Use Approvals with any files stored in Sharepoint, MediaValet, or Bynder.

HTML proofing

Preview, proof, and approve HTML web pages in Wrike. Use HTML proofing to add comments directly to web pages within Wrike and add links to approvals.

Advanced resource management

Improve your resource allocation process with job roles. Create custom job roles, like "designer" or "developer," and assign them to your team members. Use Bookings to reserve blocks of time based on how much effort you think the work might take for each assignee or job role in a project.

Budgeting

Estimate and track financials across all projects in one place and in real time. With Budgeting, you can set hourly rates for users and job roles. Track your projects' financial progress in the Table view by comparing planned and actual costs in the pre-configured financial fields.

Locked Spaces

Locked Spaces are restricted, secure Spaces for confidential collaboration, such as at the board or executive level. You can also use Locked Spaces to create isolated working Spaces for separate customers.

Wrike Analyze

Wrike Analyze is a fully customizable solution that allows you to create analytical dashboards based on data from your Wrike account. You can use any of the pre-built analytics templates or build a custom

analytics board to focus on your relevant metrics. Get a bird's-eye view of your running projects, analyze your completed work, and easily share the interactive summary with stakeholders.
